Prof. Dr. Ricky Chan
Editor Special Issues
Journal of Systems and Software

Rennes, October 3rd 2016

Dear Prof. Chan,

On behalf of all authors, I would like to submit our article entitled *"Reverse Engineering Language Product Lines from Existing DSL Variants"* for publication to the special issue on software reuse within the Journal of Systems and Software.

Our article is an extended version of a previous paper entitled: "Reverse Engineering Reusable Language Modules from Legacy DSLs" published in the International Conference on Software Reuse.

In our previous paper, we propose a reverse engineering technique to produce a set of language modules extracting the commonalities existing in a set of DSLs. In this article, we completed our approach to produce not only language modules, but also entire language product lines that permit to configure and derive new DSL variants.

Please, consider our article for publication in the special issue.

Kind regards,

David Méndez Acuña
